

# Price $f(x)$

## Release '1.4'

---

### Release Notes

**Go-live date:**

**2011-12-28**

## 1. New features & Changes

---

- **User groups.** With user groups the editability of certain master data (product, customer, price parameters) can be limited to arbitrary user groups. The administrator can maintain and assign user groups.
- **Structured price parameters.** Price parameters can now be organized in a tree-like structure. The tree can be freely defined.
- **Redesigned PriceShop.** The Priceshop module received a massive rework treatment to improve the overall usability
- **New formula expression "Pricelist".** With this new function you can directly access prices of previously calculated and approved pricelists to e.g. calculate price differences
- **More general purpose attributes.** The number of available attributes was increased from 15 to 30
- **Mass-Edit.** Mass data changes of product and customer master data can now be done directly from the browser UI
- **Rework of chart UI and schema editor.** The definition and selection of the calculation methods for measures (total, percent, per unit) was reworked to achieve easier and less confusing setup and usage
- **Analytics data management.** Analytical data can now be also maintained in a record based fashion with all standard operations (create, delete, update) directly from the browser UI
