

# Price $f(x)$

## Release '1.5'

---

### Release Notes

**Go-live date:**

**2012-03-04**

## 1. New features & Changes

---

- **Price list simulation.** The new functionality of the price simulation in the PriceBuilder module allows the creation of a parallel simulation layer on the basis of the current live price parameters and calculation logics. One can run in that layer unlimited number of price simulation rounds. After completion of the simulation all new optimized settings can be activated and with that replace the recent settings. From that point of time all price calculations will be made on the basis of the result from the price simulation. All old settings will not be removed or deleted but deactivated for audit and possible partial or full reactivation purposes.
- **Product Details Editor .** The capabilities in the area of the product master management in PriceBuilder module have been significantly extended. In addition to those today available management of bills of materials, kits, bundles and competitive data, the following details can managed and displayed:
  - Product references, needed for the proper management of links of all kind between products like for example replacement parts, successor products etc.
  - Display of calculation schema incl. all details based on the current price logic.
  - Full overview of all prices of the particular product across all pricelist in which the product is included.
  - Display of historical price information, i.e. average net price per customer etc., for the particular product
  - Display of all other price relevant data, i.e. cost history, number of installations, market share, etc.
  - Management and display of all detail product description, pictures, comments, warnings and other information
  - Flexible combination of display of all above details for one or multiple products in one screen.

In addition the user has the ability to define and save his own, individual views.

- **Drill-down.** This functionality in the PriceAnalyzer module allows the end user to zoom in into the selected data directly within the displayed diagram. With one click one dives deeper into the same or other classification or aggregation of the pre selection data in the diagram.
- **New analytical charts .** The currently available portfolio of analytical charts in PriceAnalyzer module will be extended with the following diagrams:
  - Bar chart, incl. optional combination with line chart
  - Time series
  - Multiple comparison waterfall
