

Price $f(x)$

Release 'Slivovitz'

Release Notes

Go-live date:

2013-03-02

1. New features & Changes

- **NEW: Introduction of approval workflow**

In the first stage of this new functionality the quote process will be supported by an approval workflow. The user can set up and define conditions / rules for approval of price offers in the UI. Offer prices which do not match the conditions / rules need to be approved by one or more approvers. The person will be informed via eMail. In the following releases we will expand the new component to other areas of Price f(x) such as price lists, changes of pricing parameters and pricing rules/guidelines.
- **NEW: Completely redesigned Price Shop Module**

Due to a number of new requirements from our customers we've redesigned the Price Shop module of Price f(x). In addition to the approval workflow the transparent and flexible arrangement of the calculations outputs in the price offer screen and additional functionality was in focus.
- **NEW: Development of a flexible user configurable integration adapter**

Our partner [ISB AG](#) has developed an adapter, which allows Price f(x) a fast and easy to set up data integration (inbound and outbound) from and to different systems such as SAP ERP or customer portals.
- **Extensions in the PriceAnalyzer module**
 - Show/hide data point labels within the chart
 - Possibility to retract / hide the diagram settings
 - Organization of saved charts in folders
- **Extensions in the PriceBuilder module**
 - Product detail screen available in Price list simulation
 - Additional Pricing Parameter types for matrix
 - New formulas and lookups in the price calculation schema (Product Extension Lookup, Datamart Lookup, etc.)
- **Other enhancements**
 - Excel Client - Enable alphabetical sorting of lists
 - New user roles (read only views)
